

Conference Announcement

Collective Behavior: Macroscopic versus Kinetic Descriptions

May 19-23, 2014

Department of Mathematics
Imperial College London

Organizers

José A. Carrillo	Imperial College London
Alina Chertock	North Carolina State University
Pierre Degond	Imperial College London
Marco Di Francesco	University of Bath
Eitan Tadmor	University of Maryland

Confirmed Participants

Eshel Ben-Jacob	Tel Aviv University
Adrien Blanchet	Université Toulouse 1 Capitole
David Cai	Shanghai Jiao Tong University
Vincent Calvez	École Normale Supérieure de Lyon
José A. Carrillo	Imperial College London
Alina Chertock	North Carolina State University
Young-Pil Choi	Imperial College London
Pierre Degond	Imperial College London
Ron DeVore	Texas A&M University
Marco Di Francesco	University of Bath
Raluca Eftimie	Dundee University
Bjorn Engquist	The University of Texas at Austin
Yanghong Huang	Imperial College London
Pierre-Emmanuel Jabin	University of Maryland
Axel Klar	Technische Universität Kaiserslautern
Theodore Kolokolnikov	Dalhousie University
Jian-Guo Liu	Duke University
Philip K. Maini	Oxford University
Cristina Marchetti	Syracuse University
Stephan Martin	Imperial College London
Sébastien Motsch	Arizona State University
Benoît Perthame	Université Pierre et Marie Curie
Christian Ringhofer	Arizona State University
Endre Süli	Oxford University
Eitan Tadmor	University of Maryland
Changhui Tan	University of Maryland
Guy Theraulaz	Université Paul Sabatier
Giuseppe Toscani	University of Pavia
Jonathan Touboul	Collège de France, Paris

Scientific Background

Nonlinear nonlocal aggregation/diffusion equations are basic macroscopic models in many collective behavior applications such as bacterial chemotaxis, swarming, and computational neuroscience, to name a few. Kinetic modeling is being derived in these applications to include a mesoscopic level of description bridging the microscopic to the macroscopic scales.

Goals

To discuss recent developments of mathematical analysis tools and methods, design of suitable numerical schemes, and numerical simulation in some selected new applications in the field of aggregation/diffusion and kinetic PDEs. In particular, we will focus on the interplay between aggregation and interaction behavior in nonlocal/nonlinear transport and diffusion phenomena.

A limited number of openings are available.

To apply, complete the online application before **March 1, 2014.**

For more information and to apply:

www.ki-net.umd.edu

Partial funding is also provided by:

In this conference we will also honor
Eitan Tadmor's 60th birthday.
