

$$\frac{\partial f}{\partial t} + v \cdot \nabla_x f = \frac{F \cdot \nabla_x f}{m \cdot \nabla_v}$$

## Workshop Announcement

### **Kinetic Description of Multiscale Phenomena The Annual Kinetic FRG Meeting**

**September 21-25, 2009**

**Organizers: Shi Jin, Eitan Tadmor, Athanasios Tzavaras**

#### CONFIRMED PARTICIPANTS

**Pierre Degond** Université Paul Sabatier

**Rodney Fox** Iowa State University

**Shi Jin** University of Wisconsin

**Dave Levermore** University of Maryland

**Zhiwu Lin** Georgia Institute of Technology

**Chun Lin** Institute for Mathematics and Its Applications

**Hailiang Liu** Iowa State University

**Tai-Ping Liu** Stanford University

**Antoine Mellet** University of Maryland

**Fraydoun Rezakhanlou** University of California, Berkeley

**Christian Ringhofer** Arizona State University

**Eitan Tadmor** University of Maryland

**Athanasios Tzavaras** University of Maryland

**Alexis Vasseur** University of Texas at Austin

**A limited number of openings are available.  
Priority will be given to postdocs  
and non-tenured junior faculty.**

**To apply please RSVP at:**

**[www.cscamm.umd.edu/frg/frg0909/](http://www.cscamm.umd.edu/frg/frg0909/)**

**Email: [frg0909@cscamm.umd.edu](mailto:frg0909@cscamm.umd.edu)**

#### SCIENTIFIC BACKGROUND

Kinetic descriptions play a critical role in the physical, social, and biological sciences, and have expanded into diverse applications of cutting-edge technology ranging from microfluidics, semiconductors, polymers and plasma to traffic networking and swarming. Modern kinetic theory captures fundamental issues in the modeling and simulation of phenomena across length and time scales, from the atomistic to the continuum. In the context of kinetic theory mathematical approaches help the design of numerical methods and, conversely, numerical simulations help improve the quantitative understanding of underlying complex problems.

Center for Scientific Computation  
And Mathematical Modeling (CSCAMM)  
CSIC Building #406, Paint Branch Drive
