

REGULARITY SPACES & RELATED TOPICS

in Nonlinear PDEs

Fall '95

Graduate course – Applied Mathematics

Eitan Tadmor

Contents

1	Nonlinear PDEs – Time-Dependent Examples	0
1.1	Navier-Stokes equations	0
1.2	Hyperbolic conservation laws and related equations	0
2	Distributions	0
2.1	$\mathcal{D}$ and its dual	0
2.2	Calculus of distributions – convolutions, derivatives,..	0
2.3	Distributions as generalized functions; mollifiers	0
2.4	Examples	0
2.5	Restrictions, limitations and warnings	0
2.6	Tempered distributions and their FT	0
3	Regularity Spaces of Functions	0
3.1	Sobolev spaces	0
3.1.1	$W^s(L^p)$ -spaces of integer order	1
3.1.2	Moduli of smoothness	1
3.1.3	Spaces of fractional order	1
3.2	Besov and related spaces	1
3.2.1	Characterization by dyadic Fourier blocks	1

3.2.2	Characterization by divided differences	1
3.2.3	Orlicz spaces	1
3.3	Imbeddings and compact imbeddings	1
3.3.1	Sobolev imbedding theorems	1
3.3.2	Other useful inequalities	1
3.4	*Oscillation of functions	1
3.4.1	Hardy-Littlewood maximal function	2
3.4.2	Weak L^p and Lorentz spaces	2
3.4.3	Sharp function; BMO...	2
3.4.4	Hardy spaces	2
4	Interpolation (of Operators)	2
4.1	Complex interpolation	2
4.1.1	The Risez-Thorin theorem	2
4.1.2	Rearrangement invariant spaces	2
4.2	The K-functional and real interpolation	2
4.3	Interpolation between Sobolev and Besov spaces . . .	2
5	Fourier Multipliers	2
5.1	Marcinkiewicz theorem	2
5.2	Hörmander theorem	3
6	Nonlinear PDEs revisited – Applications	3
6.1	Navier-Stokes equations	3
6.1.1	from kinetic to fluid models	3
6.2	Hyperbolic conservation laws	3
6.3	Compensated compactness, averaging lemma...	3
